SUMMARY

I am a software developer focused on web-development and building enterprise application software using visual studio and the .net framework. I am comfortable working in both front and back-end development. My previous experience as an EHS coordinator I led operational projects, designed and wrote protocols, conducted audits, held training classes, met and negotiated with vendors, and complied with state and federal regulations. As a supervisor I managed multiple departments and employees, solved technical, as well as departmental issues, ensured employee compliance with various regulatory bodies, and continuously worked to improve both the employees and departments that I managed. I am very confident I can quickly become a valuable asset to your company.

PROFESSIONAL SKILLS+

- Strong front and back-end development skills
- Strong understanding of object-oriented programming and SOLID design principles
- Knowledge of the software development lifecycle SDLC
- Prioritize responsibilities to meet strict deadlines
- Excellent problem solver and team player, I adapt and work well in any environment
